

DevSecOps (DevOps + Security) Advanced Instructor-Led Training

Program Overview

- Components in a DevOps Pipeline
- Shifting to DevSecOps processes and Secure SDLC
- Security Tools and Terminologies
- Secrete Management from codebase
- Vulnerability Management
- DevSecOps pipelines using Git Secrets, SCA, SAST, DAST, OWASP Tools etc
- Security Best Practices and OWASP Top 10

Training Level

- Intermediate course with Practical Demos and Project

Pre-requisites

- Participants should have knowledge of running basic linux commands
- Participants should have basic understanding of application Security practices like OWASP Top 10
- You should have experience with DevOps tools and CICD pipeline

Target Audience

This DevSecOps Online Training will be suitable for software developers, technical project managers, architects, operations support, deployment engineers, Freshers and Induction Batch

Training Key Features

- Live, online classroom training by experienced instructor
- Real-World Projects: Gain practical, hands-on experience
- Training involves whiteboard and Practical Demos
- Flexible and adjustable class timings on weekday or Weekends
- Tailored modules to boost your Dev+Sec+Ops expertise

Course Duration

- Duration: 1 Month

Course Curriculum

1. Runtime Security & Threat Detection

- Detect and alert on any behavior that involves making Linux system calls

2. Compliance as Code (CaC)

- Analyze the code for issues
- Audit the application using Inspec
- Automating Compliance Checks
- **Demo:**

3. Infrastructure as Code Security

- Static analysis of your terraform code to detect potential security vulnerabilities and misconfigurations in your terraformed infrastructure

4. Container Security (CS)

- Container signing & verification
- Container Security
 - Privilege Escalation
 - Capabilities
 - Read-Only Filesystem
- Docker Security Audit & Benchmarking
- Container and Container Security Problems
- Container Security
 - Detects vulnerabilities in OS packages and application dependencies
 - Known vulnerabilities (CVEs)
 - IaC issues and misconfigurations
 - Sensitive information and secrets
- Container Security Best Practices
- **Demo:**

5. Threat Modelling (Design)

- STRIDE
- **Demo:**

Caption Project

- Secure CI/CD pipeline in Jenkins to build Java application using SAST, DAST and SCA
