AI-POWERED DEVSECOPS Advanced Transition Program

A practical, project-led learning pathway for students, freshers, working professionals, and career switchers who want to build job-ready skills across DevSecOps, application security, and AI security.

6–8 WEEKS	LIVE, INSTRUCTOR-LED	HANDS-ON PROJECTS

Program at a glance

Who it is for	College students, freshers, professionals, and career switchers preparing for DevSecOps / AppSec / AI Security roles.
Learning format	Personalized, instructor-led individual training with guided labs, practical exercises, mentor feedback, and a portfolio capstone.
Outcome	Build demonstrable projects and learn how to integrate security into CI/CD and AI-enabled application workflows.

Program positioning

This curriculum is exclusively for individual training. Batch training, corporate training, enterprise workshops, and organization-specific delivery are not included.

Curriculum & Learning Path

The program progresses from core concepts to secure delivery practices, then applies them to AI-enabled applications and security workflows.

Module 1 — AI Foundations for DevSecOps Engineers — Week 1

- LLM and generative AI fundamentals for practitioners
- Prompting, model limitations, hallucinations, and responsible use
- Where AI can assist engineering and security workflows

Module 2 — AI-Enhanced DevSecOps Pipelines — Week 2

- Secure CI/CD workflow and pipeline stages
- Using AI to explain build failures, test results, and security findings
- Human review, least privilege, secrets handling, and auditability

Module 3 — AI-Assisted Application Security — Week 3

- SAST, SCA, DAST, secrets scanning, and container-image scanning concepts
- Prioritizing findings, reducing noise, and validating remediation
- Secure coding review and risk-based triage

Module 4 — GenAI & LLM Application Security — Week 4

- LLM application architecture: prompts, retrieval, tools, and outputs
- Prompt injection, sensitive data exposure, insecure output handling, and excessive agency
- Embedding and vector-store security, access controls, and data boundaries

Module 5 — AI Agents & LLMOps Security — Week 5

- Agent tool permissions, identity, trust boundaries, and approval gates
- Evaluation, tracing, monitoring, and incident investigation
- Threat modeling and security testing for AI-enabled workflows

Module 6 — Capstone & Portfolio — Weeks 6–8

- Build, test, document, and present a security-focused project
- Create a concise architecture diagram, threat model, and test evidence
- Prepare a project walkthrough suitable for a portfolio or interview

Portfolio Projects & Assessment

Portfolio projects

01 AI-Assisted Secure CI/CD

Integrate security checks into a sample delivery pipeline and use AI-assisted triage to explain findings while retaining human validation.

02 LLM Application Security Lab

Test a sample LLM-enabled application for prompt injection, unsafe output handling, sensitive-data exposure, and retrieval access-control weaknesses.

03 AI Security Triage Assistant

Create a small workflow that summarizes security findings, groups duplicates, suggests remediation, and records reviewer approval.

Assessment approach

Guided labs	30%
Security exercises	25%
Capstone project	35%
Project presentation	10%

Expected outcomes

- Explain how AI can support DevSecOps and application-security workflows without replacing security validation.
- Identify common risks in LLM-enabled applications and agentic workflows.
- Demonstrate practical security testing, triage, documentation, and remediation reasoning.
- Present at least one portfolio-ready project with test evidence and a clear technical walkthrough.

Prerequisites & Enrollment

Recommended prerequisites

• Basic familiarity with software development, Git, and command-line usage.

• A willingness to practice with sample repositories and security tools.

• Python basics are helpful for AI-focused exercises; advanced machine-learning knowledge is not required.

Individual Training Fees

Launch offer for personalized, instructor-led individual training. This fee does not apply to batch or corporate training.

LAUNCH OFFER

■30,000

Individual training only

Instructor-led learning • Guided labs • Project-based practice

What the individual offer covers

• Personalized instructor-led individual sessions.

• Curriculum-aligned guided labs and project work.

• Capstone guidance and a project presentation opportunity.

Important notes

The individual training launch offer is ■30,000. Applicable taxes, session schedule, and specific inclusions should be confirmed at enrollment. Batch and corporate training are outside this offer.

NextGen DevSecOps AI

Learn. Build. Secure. Transition with practical projects.
